

YOUR VEHICLE IS NOW EQUIPPED WITH **POWERBOOST**

Power
Boost

This means that your lighting has one mode that is E-marked and one with Powerboost for more brightness (not E-marked). When switching between the two modes we recommend that you stand with the vehicle against a wall to be able to most effectively see the switch.

The mode switch is done most easily when your auxiliary lights are connected, with the vehicle's high beam lever and with the light switch in position 0 or parking light.

You switch Powerboost mode according to the following steps:

Step 1: Turn on the auxiliary lights for about 10 seconds (between 7-13 seconds)

Step 2: Flash the auxiliary lights in rapid succession 10 times (within 10 seconds)

Step 3: Then turn on the auxiliary lights again and leave them on, after 5 seconds the Powerboost function switches automatically

LEDSON

Lights for Safety and Style

The logo features the word "LEDSON" in a bold, white, sans-serif font. Below it is a horizontal line of 12 green dots. Underneath the dots is the tagline "Lights for Safety and Style" in a smaller, white, sans-serif font. The entire logo is centered on a black background with several diagonal golden light streaks.
